1.1 Slice Testing

1.1.1 Chosen Method for Testing

- **Class:** *net.sf.borg.common.DateUtil.java*
- **Method:** *minuteString(int mins)*
- **Method Description:** This method generate a human reable string for a particular number of minutes. It returns the string in terms of hours or minutes or both hours and mintues.
 - **mins** - The first argument is of type integer.

Following is the code of the *minuteString* method:

```
1  public static String minuteString(int mins) {
2
3      int hours = mins / 60;
4      int minsPast = mins % 60;
5
6      String minutesString;
7      String hoursString;
8
9      if (hours > 1) {
10         hoursString = hours + " " +
11             Resource.getResourceString("Hours");
12     } else if (hours > 0) {
13         hoursString = hours + " " + Resource.getResourceString("Hour");
14     } else {
15         hoursString = "";
16     }
17
18     if (minsPast > 1) {
19         minutesString = minsPast + " " +
20             Resource.getResourceString("Minutes");
21     } else if (minsPast > 0) {
22         minutesString = minsPast + " " +
23             Resource.getResourceString("Minute");
24     } else if (hours >= 1) {
25         minutesString = "";
26     }
```

```
23     } else {
24         minutesString = minsPast + " " +
                Resource.getResourceString("Minutes");
25     }
26
27     // space between hours and minutes
28     if (!hoursString.equals("") && !minutesString.equals(""))
29         minutesString = " " + minutesString;
30
31     return hoursString + minutesString;
32 }
```

1.1.2 Forward Slicing

1.1.3 Backward Slicing

1.1.4 Dynamic Slicing

- The data flow analysis you performed and the calculation of the coverage metrics. You must show which test cases are responsible for which dc-paths.
- A description of the test cases you added to improve coverage. If your coverage was already high, discuss how your testing was able to achieve this.
- The slices that you identified and the percentage of slices that your testing covers. You must show which test cases are responsible for which slices.
- A description of the test cases you added to improve slice coverage. If your coverage was already high, discuss how your testing was able to achieve this.
- Evaluate the effectiveness of your test cases using mutation testing. Discuss and address any issues if you have found in your written report.
- Attaching bug reports if bugs are discovered using your testing methods. You should use the same bug report format as in Assignment 1. Do not file these bug reports to the projects bug report system.
- An appendix with the specification of the methods you are testing

2 JPetStore

- The test scenarios that you have created;

- The request rates and the duration of the load tests;
- The analysis of your load tests and the description of any problems that you have found (if there are any).
